Thank you for allowing me to speak as I was unable to attend the last 2 meetings.

As I am reaching the end of my 3rd term as a County legislator, I tried to be a fair and good representative for Cattaraugus County and District 3 which includes Farmersville. I hope you all remember you represent all the residents of Farmersville, your decisions should be for the good of the whole.

I have never stated I am for or against the wind mill project. I feel I have never been able to get a honest answer to any question. I do not feel Inuenergy has been honest and are unwilling to offer answers to any concerns our residents have. I have only heard one true statement, that being from the engineer who stated he didn't know if the drilling would harm our water supply.

There are 3 issues I would like to address.

What if the hours of flicker that many of our residents will experience causes

migraines - seizures - sight problems and
etc.

What if the noise causes lack of sleep
or general malaise - or irritates some
pre existing condition - I think there
may be on this board some that may
have conditions that could increase
chance for flareup if exposed to flicker
or noise.

What if flicker or noise causes some
illness or condition in our children
and grandchildren and future
children. Remember this project
will be here for many years.

Lastly what if the drilling harms
the pristine water we have here
in Farmersville. Its a fact we can
not exist with out water.

If you have the answers to any
of the if's. I would hope you would
share with the residents of Farmersville
If not I would hope before going
forward you would try to find
the answers.

Donna Dickma
